Beyond
NETWORKS

The HyperVoice IP-PBX solution provides any small to medium sized business with a full featured Voice over IP (VoIP) service. Accomplished by your SIP plans, HyperVoice offers an unparalleled non proprietary alternative to a key system where productivity, customer service and low costs are critical.

Businesses can deploy HyperVoice for much less than what it would cost to install a traditional telephone system. In addition, you could receive an average 50% reduction on your phone bills - the total savings are so significant that the implementation cost could be recovered well within the first six months ^.

System consists of a HyperVoice 2200 IP PBX and two business grade IP handsets. System is to be installed to a standard office with Internet access points available to the PBX and handsets positions. Price is exclusive of GST.

^ Based on our existing clients who take our recommended VoIP plans, total savings is subject to the SIP providers and their plans and charges may vary without prior notice.
